Summary

Computer Engineering student at VESIT with experience in Full Stack Development and Machine learning. I am always curious to learn new technologies and develop solutions with real world impact. I demonstrated this during my internship, where I developed an AIML application for Government Dental Hospital, Mumbai for Forensic study. I have won **6x Hackathons**, including ETH-Mumbai at World Trade Center,Mumbai. I have good leadership and problem-solving skills which have been portrayed through leading my team during multiple hackathons.

Education

- **Vivekanand Education Society's Institute of Technology** — Mumbai
  B.E. Computer Science – 9.37 CGPA — *2023 – 2027*

Projects

- **NaviBus – Bus Tracking System** [Link]
  A Full Stack Application for passengers traveling through busses in Navi Mumbai region with ETL of real NMMT data having features like bus scheduling, finding the optimized route, user friendly UI with occupied and pregnancy seat indicators. The backend and database are designed for faster and accurate retrieval.
- **AI-Powered Interview Preparation Platform (Google TechSprint Winner)** [Link]
  An AI automated interview platform which analyzes candidate's technical and non-technical skills tailored to the user's resume and job description enabling real time, personalized interview practice with multimodal features, dynamic follow up questions and evaluation with holistic reports.
- **NisargSathi (Genesis Hackathon Winner)** [Link]
  Developed an AI-powered application which promotes sustainable practices and green environment by providing users personalized 15-30 sec reels based on users geo-location, age, real-time weather and news of locality using artificial intelligence i built pipelines which ensured minimal AI credits usage.
- **Qualki** [Link]
  Built a SIEM Tool for Intruder Detection using Quantum Machine Learning and PQC,I built a custom dataset of real world os/network attack logs using linux and windows systems.

Experience

- **VESIT — Computer Vision and Backend Intern** — Mumbai
  May 2025 – July 2025
  - During the Internship,I built an application for Government Dental Hospital and College for Forensic study of IOPA/OPG of Dental images using deep learning and computer vision algorithms to achieve higher pattern matching and similarity detection on real world patients dataset provided by the hospital. Research publication is under process.
- **VESIT — Blockchain Intern** — Mumbai
  Nov 2024 – Jan 2025
  - Developed distributed blockchain systems using Hyperledger Fabric.
- **Hackathons — 6x Winner** — Various
  2024 – Present
  - Demonstrated rapid prototyping, quick learning, and creative problem-solving fueled by a strong sense of curiosity
  - Collaborated in teams demonstrating strong communication and execution skills

Skills

Languages: Java, Python, SQL
AI/ML: PyTorch, TensorFlow
Frameworks: GoogleADK, Django, Node.js
Databases: MySQL, MongoDB
Tools: Git

Achievements

6x Hackathon Winner building real-world AI and software systems
Participant, ETHGlobal Hackathon
Research paper under review on AI-based forensic pipeline
